The Internet is a collection of networks originally paid for by the U.S. Department of Defense. Its purpose was to provide a communications infrastructure more resilient to attack than the public communications channels in the event of war. When research became a priority in the 1960s and 1970s, money was given to the National Science Foundation, which became the de facto administrator of the network. The NSF ran the primary arteries of the Internet until the late 1980s. A substantial amount of ...

3 Packet classification in large ISPs: design and evaluation of decision tree classifiers

June 2005 **ACM SIGMETRICS Performance Evaluation Review , Proceedings of the 2005 ACM SIGMETRICS international conference on Measurement and modeling of computer systems SIGMETRICS '05**, Volume 33 Issue 1

Publisher: ACM Press

Full text available: pdf(195.66 KB) Additional Information: full citation, abstract, references, citings, index terms

Packet classification, although extensively studied, is an evolving problem. Growing and changing needs necessitate the use of larger filters with more complex rules. The increased complexity and size pose implementation challenges on current hardware solutions and drive the development of software classifiers, in particular, decision-tree based classifiers. Important performance measures for these classifiers are time and memory due to required high throughput and use of limited fast memory.We ...

June 2002 **ACM SIGMOBILE Mobile Computing and Communications Review**, Volume 6 Issue 3
Publisher: ACM Press
Full text available: pdf(180.11 KB) Additional Information: full citation, abstract, references, citings, index terms

Sound and effective authentication, authorization and accounting (AAA) schemes for convenient and secure mobile wireless accesses are of great importance given the increased popularity and business opportunities in public wireless LAN hot spots. One possible scheme, which uses the mobile users' service providers as the single point of contact for all AAA transactions, is emerging as a very promising solution. We refer to such service providers as "virtual operators". In this paper, we discuss va ...

3 Scalable support for transparent mobile host internetworking

David B. Johnson
August 1995 **Wireless Networks**, Volume 1 Issue 3
Publisher: Kluwer Academic Publishers
Full text available: pdf(1.10 MB) Additional Information: full citation, abstract, references, citings

This paper considers the problem of providing transparent support for very large numbers of mobile hosts within a large internetwork such as the Internet. The availability of powerful mobile computing devices and wireless networking products and services is increasing dramatically, but internetworking protocols such as IP used in the Internet do not currently support host movement. To address this need, the Internet Engineering Task Force (IETF) is currently developing protocols for mobile ...

4 Intercepting mobile communications: the insecurity of 802.11

computing and networking MobiCom '01
Publisher: ACM Press

Full text available: pdf(181.52 KB) Additional Information: full citation, abstract, references, citings, index terms

The 802.11 standard for wireless networks includes a Wired Equivalent Privacy (WEP) protocol, used to protect link-layer communications from eavesdropping and other attacks. We have discovered several serious security flaws in the protocol, stemming from mis-application of cryptographic primitives. The flaws lead to a number of practical attacks that demonstrate that WEP fails to achieve its security goals. In this paper, we discuss in detail each of the flaws, the underlying security princip ...

5 Using smartcards to secure a personalized gambling device

November 1999 **Proceedings of the 6th ACM conference on Computer and communications security CCS '99**
Publisher: ACM Press

Full text available: pdf(762.94 KB) Additional Information: full citation, abstract, references, index terms

We introduce a technique for using an untrusted device, such as a hand-held personal digital assistant or a laptop to perform real financial transactions without a network. We utilize the tamper-resistant nature of smartcards to store value on them and perform probabilistic computations based on user input. We discuss an application of this to gambling. The technique has the properties that the user is guaranteed to make money when he wins and the house is guaranteed to make money w ...

Publisher: ACM Press

Full text available: pdf(1.12 MB) Additional Information: full citation, abstract, index terms

This paper deals with security techniques for wireless Networks. The work presented is based on a review of literature regarding current and future wireless security networks systems. The aspects discussed in this paper included the choices of cryptographic algorithms such as protocols for key management and authentication. Various conclusions are drawn from existing security networks and proposed in new wireless ATM network security. Also a proposal for future research into security techniques ...

In this paper we survey issues and challenges in enhancing the survivability of mobile

wireless networks, with particular emphasis on military requirements*. Research focus on three key aspects can significantly enhance network survivability: (i) establishing and maintaining survivable topologies that strive to keep the network connected even under attack, (ii) design for end-to-end communication in challenging environments in which the path from source to destination is not wholly available at ...
